The linear growth in the lengths of a family of thick knots

Yuanan Diao, Claus Ernst, and Morwen Thistlewhite

Abstract

For any given knot $K$, a thick realization $K_0$ of $K$ is a knot of unit thickness which is of the same knot type as that of $K$. In this paper, we show that there exists a family of prime knots $\{K_n\}$ with the property that $Cr(K_n) \rightarrow n$ (as $n \rightarrow n$) such that the arc-length of any thick realization of $K_n$ will grow at least linearly with respect to $Cr(K_n)$.
